Efficient use of forest resources

Developing specific measures and recommendations to be implemented to optimise resource efficiency, circularity of production and minimize waste generation in the value chains of wood processing, recovery and recycling.

Increased recycling & acceptance of secondary wood

Valorising wood waste and enhancing cascade use of wood by improving companies' operational performance and enhancing the quality of processes and products.

Fostering the competitiveness of the European wood working sector

Establishing a well-integrated network between wood processing industry and the waste management and recycling sector, promoting European innovations

Development of sustainable societies

Increasing the use of wood in construction enhances positive social outcomes, such as increased employment in new and innovative value chains, healthier and better living environments in low-impact homes and sustainable urban projects.

HAVE YOU GOT THE 3W FACTOR?

WoodCircus invites SMEs in the wood construction value chains to participate to the 3W Factor competition for innovative solutions! Share your outstanding innovations and ideas for the future and win an award for your implemented efficiency solution or current innovation in wood processing, recycling or reuse. Winners will profit from Europe-wide communication and visibility.

Applications are open, submit your proposal via our website!
